1
2 Initial available funding for each county will be based on the number of septic systems located on sole source or
3 primary groundwater aquifers, or within a limiting distance of an identified priority surface waterbody, and population
4 density. An overall funding commitment will be identified on a pro-rata basis for the first year of the program, with
5 \$15 million available in the first year of a five-year program. The estimated funding for Tompkins County is
6 approximately \$150,000. Once the county signs the agreement with the New York State Environmental Facilities
7 Corporation, the actual allocated amount, terms and conditions and details about the disbursement process will be
8 shared with the Department.
